

Glue down installation Virtuo 30 and 55

CONDITIONS

SUBSTRATES

ACCESSORIES

INSTALLATION

LAYING CONDITIONS

SUBSTRATE EVENNESS	Flatness requirement: < 5 mm / 2 metre ruler and < 1 mm / 20 cm ruler	Flat, clean, sound, dry and solid substrate.
STORAGE	At least 24 hours prior to installation	Store the floor covering in the room where it is going to be laid.
LAYING TEMPERATURE	+ 15°C < T < + 26°C	Ideally 20°C.
DIRECT SUNLIGHT (SUNNY AREAS, BAY WINDOWS, SKYLIGHTS, SKYDOMES, ETC.)	Floor temperature < 60°C	Laying is allowed as long as the ambient temperature is regulated. In order to prevent the floor temperature from reaching excessive values up to 60°C or above, direct sunlight on the floor should be obscured by curtains, blinds or other suitable protection. Otherwise, maintain the floor covering in place with a suitable adhesive (please contact the adhesive manufacturer).
VERANDA/CONSERVATORY	Only if temperature is permanently regulated	Use an adhesive suitable for direct sunlight on the entire surface
FIRST USE	Pedestrian traffic - 48h Installation of the furniture - 72h	In case of underfloor heating, wait 7 days before turning the heating back on.

USAGE CONDITIONS

USAGE TEMPERATURE	Acceptable temperature range after installation : 20°C	e.g. +10°C to 30°C
STATIC LOADS	< 30 kg/cm ² and <200 kg/support	Do not use rubber end caps. Use flat (not tapered) end caps without any pattern that are suitable for PVC. Use end caps on furniture legs.
CASTOR CHAIRS	PVC-compatible castors according to EN 12529	Recommendation: protective mat beneath castor chairs.

CONDITIONS	SUBSTRATES	ACCESSORIES	INSTALLATION
------------	-------------------	-------------	--------------

SUBSTRATE		CONDITIONS For installing this floor covering
Concrete floor, painted concrete, levelling compound, cement based screed, anhydrite (calcium sulphate)-based screed	✓	Moisture content compliant with the relevant standards and regulation in the country of use, and always < 4% (80%RH) for cement based substrate and < 0.5% for an anhydrite-based substrate (the most stringent regulation applies). Prepare the support if necessary, and apply a smoothing compound to eliminate any irregularities.
Ceramic tiles	✓	After application of a smoothing compound.
Glued compact PVC floor coverings	✓	After examination and repair depending on the condition of the floor covering. If more than 10% is in bad condition, complete removal is necessary followed by new substrate preparation. Use an adhesive suitable for compact/compact application (refer to adhesive manufacturers)
Glued foam backed PVC floor coverings	✗	Not recommended.
Textile floor covering (carpet) / textile-backing PVC floorings	✗	Prohibited.
Vinyl asbestos tiles	✗	Prohibited.
Glued parquet / laminated floor /floating parquet or wood based panels	✗	Prohibited (complete removal).
OSB	✗	Complete removal or lining boards.
Wood-based panel flooring on joists or battens	✓	Allowed.
Parquet nailed onto battens ventilated underneath	✗	Complete removal or lining boards.
Water reversible underfloor heating	✓	Allowed. Heating must be turned off 48h before installation.
Underfloor heating with circulating water, max temperature 28°C	✓	Allowed. Heating must be turned off 48h before installation.
Radiant electric underfloor heating	✓	Allowed. Heating must be turned off 48h before installation.

The preparation of the substrate must comply with the current relevant standards in the country of use. For any information on product properties and usages, please refer to its technical datasheet: www.gerflor.com.

ACCESSORIES

INSTALLATION

The floor covering should be examined prior to installation for any visible defects. The flooring must belong to the same production batch. If there are any visible defects, please notify GERFLOR and do not begin installation without its prior approval.

GLUING OF THE SUBSTRATE

- Mix the planks/tiles from several different boxes from the same series.
- The planks/tiles must be oriented in the direction of light or in the direction of traffic.
- Planks/tiles are installed with the single bond method using an adhesive suitable for PVC tiles and planks recommended by the adhesive manufacturers and applied with a finely toothed spatula (usually A2, TKB specification) according to the indications of the technical data sheet.
- Carefully follow the instructions of the adhesive manufacturer.
- Depending on the type and condition of the substrate, the use of a primer might be recommended by the adhesive manufacturer
- Carefully respect the bonding time which depends on the temperature, the atmospheric conditions of the room, the substrate's porosity and the coverage of the adhesive used.
- Remove any surplus glue spots while work is in progress.

ACCESSORIES

INSTALLATION

INSTALLATION OF PLANKS/TILES

• For square format (MINERAL)

- Lay down the tiles in a pyramid pattern along the guidelines on the floor.
- Check the tile joints for evenness.
- Tiles can be laid at 90°, randomly or same direction

• For rectangular format

- Lay down the rectangular tiles in staggered joints (offset by half a tile) along the guidelines on the floor
- Check the tiles joints for evenness.

• For wood plank formats

- Divide the floor area into two parts with a guideline at right angle to the room's main doorway.
- Position the first plank, then continue following the guidelines by offsetting 1/3 of a plank from one row to the next (see scheme).

- Peripheral cutting using the overlapping method.

- Smoothing in two stages:

- Manually, using a smoothing press
- Rolling a smoothing roller over the entire surface once the installation is complete.
